Exercising with COPD: You can do this!

Exercise and chronic obstructive pulmonary disease (COPD) might not seem like they go together — but they do.

If you have COPD, exercise won’t make your condition worse. In fact, it can help you feel better.

Getting started
Talk with your doctor before starting an exercise program on your own. Ask about the types and amounts of exercise that are right for you.

Your doctor might want you to start with pulmonary rehab. That’s a series of exercise classes where you can learn how to be active with less shortness of breath.

If you are on oxygen, you should work out with it. Your doctor can show you how to adjust the flow rate when you’re active instead of resting.

Be active every day
You should start out slow and easy at first. You can increase your time and effort by doing a little more each day.

Aim for a mix of:
• Aerobic exercise, like walking or swimming
• Muscle-building moves with weights or bands
• Stretching to warm up and cool down

To stay motivated, set small goals for yourself. You’ll be surprised what you can do!

4 ways to take charge
If you have a chronic condition, take it step by step:

1. Learn all you can about it.
2. Work with your doctor on a care plan.
3. Take your medications.
4. Aim for healthy habits.

Ready, set, action: Make a plan to manage COPD

If you have chronic obstructive pulmonary disease (COPD), an action plan can be a huge help.

What a plan can do for you
Your plan can tell you:
• What medicines you need and when to take them
• How to spot a flare-up
• When you should use oxygen therapy
• When you should get more rest
• When to start pursed-lip breathing
• When to call your doctor
• When to call 911 or go to the ER

Your plan can also remind you of the steps you’re taking to feel better and protect your health. That can include things like:
• Flu and pneumonia shots
• Resources to help you quit smoking
• Your exercise and diet plans
• Pulmonary rehab to help improve your breathing

Keep up the good work!
If you don’t have a COPD action plan, talk with your doctor. It’s an important document the two of you can work on together.

If you do have one, bring it to each doctor visit. That way, you and your doctor can talk about how it’s working for you.

Know the risks of opioids

Opioids are strong pain medicines. They’re easy to get addicted to.

If you need help with pain, talk to your doctor about safer options. If you use an opioid, take the smallest dose you can for the shortest time possible, and ask about Narcan (naloxone). It could save your life.

Want to be drug-free? Call the National Helpline at 1-800-662-HELP (1-800-662-4357).
